

Please reject the NAB petition 04-160. I utilize XM instant traffic and weather on a regular basis - to keep my family safe. This is a freedom of choice issue that should be decided in favor of the public at large, not the lobbyist. Regulation doesn't mean restriction to the status quo - innovative communication scenario's are being developed regulariy, the market place will decide who's doing the job with their wallet - I have. I'm sick of commercial air waves constant ad campaigns and recent censorship attempts - I dont need to be protected, I can change the channel or pay for unrestricted sattelite service. I choose the later and resent attempts to infringe on my freedom further with silly restrictions. Thank you for your consideration.
